

## OpenSHAPA: 1.05 Beta

---

### **1781: Update OpenSHAPA to use 0.0.9 lib**

OpenSHAPA plugin interface has been expanded to allow plugin developers define 3 custom call back buttons that can be added to the track header.

### **1654: Tag up usage patterns within OpenSHAPA with the latest version of UserMetrix.**

If a user opts-in, more OpenSHAPA features are now captured via UserMetrix.

### **72: Quicktime Viewer - Volume control.**

When viewing data with the data controller; users are now able to control the audio level of individual tracks.

### **885: After deleting a cell, you can't add cells (without some trouble)**

When editing the spreadsheet; it is now possible to add cells after deleting stuff from the spreadsheet.

### **938: NewDatabase - New Non Name Database causes New Database window to close**

When creating new databases; entering an invalid database name now presents a warning dialog that when closed returns you to the new database dialog.

### **1537: Track tests: Zoom tests**

When running the automated test suite UI tests for zooming the track view in and out are now executed.

### **1538: Track test: Test scrolling**

When running the automated test suite; UI tests for scrolling the track view are now executed.

### **1562: SHAPA file load test**

When running the automated test suite; a UI test for ensuring that opening a shapa file correctly adds all data is now executed.

### **1568: Having \ as the last character in a text field breaks the file**

When saving project files; saving a spreadsheet with a \ as the last character in a text field will now save correctly.

### **1681: Write test to do video comparision.**

When running the automated test suite; visual tests for ensuring that video is correctly place are now also executed.

### **1683: DataController visual tests.**

When running the automated test suite; visual tests for ensuring the data controller behaves correctly is now also executed.

### **1694: When a video is in a different place than before, .opf files will open an uncloseable blank window**

When opening project files; a project file that contains references to missing videos will now display a warning dialog listing the problems.

### **1704: Write test to ensure that a warning is displayed when the user doesn't have permissions**

When running the automated test suite; a test for checking that a warning is displayed to the user when the don't have permissions is now also executed.

### **1726: When vocab arguments contain a '-' the file does not save correctly.**

When saving projects; vocab arguments containing a hyphen now save correctly.

### **1705: Crash when starting up on new machine (NPE).**

When starting OpenSHAPA on a new machine; OpenSHAPA no longer generates a null pointer exception and starts smoothly.

### **1719: Remove build server link from openshapa website.**

WEBSITE - Removed unnecessary link from the OpenSHAPA website.

### **1728: Snap changes.**

When editing tracks within the track viewer; the snap feature is now always on, and the snap button has been renamed 'snap region' and is responsible for setting the region of interest (ctrl+'+').

### **1737: Create test.**

When running the automated test suite; a UI test for ensuring cells are correctly created is now executed.

### **1743: A few visual tests appear to fail on leopard tests on the server... Looks most likely to be thresholding issues.**

When running the automated test suite; the visual tests now correctly pass on OSX Leopard.

### **1750: Create test for 1568.**

When running the automated test suite; a UI test for ensuring that files containing a '\' are saved correctly is now executed.

### **1751: Pressing Ctrl+S saves the project to the root directory**

When saving projects; pressing 'ctrl+s' saves the project to its original location rather than the root directory.

**1752: Create test for 1694 - Missing video files on opf open.**

When running the automated test suite; a new test for ensuring that missing video files raise a warning dialog is now executed.

**1775: Upgrade Fogbugz 7.3.0**

SERVER - Upgraded Fogbugz to the latest version.

**1571: Write more advanced ODB save load tests**

When running the automated test suite; UI tests for more complicated ODB files are now executed.
