

Release Notes - OpenSHAPA: 0.92 Alpha

313: We need a icon/logo for OpenSHAPA - for splash screen / menu bars / website

We now have graphics for icons and splash-screens.

346: New cell insert should scroll display

When creating new cells; the spreadsheet will automatically scroll to the new cell.

438: Seems to be redudant separator in the File Menu on the MAC

When viewing the File menu on OSX; it no longer displays a redundant separator at the bottom of the menu.

469: Zoom shortcuts don't work in Windows

When zooming the spreadsheet on windows; the shortcut keys (ctrl+ and ctrl-) can now be used to perform the relevant zoom operation.

524: Esc key adds blocks to text and nominal

When editing nominal and text cells; pressing the 'esc' key is now ignored and does not change the cell contents.

468: Zoom shortcut - "Meta" should be "Ctrl" in windows

When viewing the spreadsheet menu on windows; zoom shortcut keys are displayed with a 'ctrl' prefix.

489: Write UI tests for matrices

When running UI tests for OpenSHAPA; basic tests for matrices are now performed.

504: The console window has no name

When viewing the scripting console; the console window now has the name "Scripting Console".

514: In predicate, on test0, for example, pressing tab should go to next arg not predicated name

When editing predicates; pressing tab with the predicate name selected will select the next arg, not the entire predicate name.

516: Ctrl-tab tabs to random locations in Timestamp

When hitting ctrl-tab to cycle between spreadsheet cells; either the entire timestamp will be selected, or the last valid caret position will be used.

517: Tab should move to next variable

When editing the spreadsheet; pressing tab will move and select the entire next variable.

519: Caret bounce in text editor moving down cells

When moving up and down the cells in a spreadsheet; the current caret position should be used in the desired adjacent cell.

521: Shortcut for temporal ordering on mac should be command key

When toggling temporal ordering on OSX; the shortcut key is now prefixed with a 'meta' key.

541: When an extension is typed into the save box eg. ".csv", an extra extension is added on to this. This is not standard behaviour

When saving the database as a CSV file; the output file will always contain a single trailing ".csv" extension.

535: Need to update WordPress and install a cache plugin.

SERVER - Updated WordPress to latest version and installed cache plugin.

536: Need to update Piwik

SERVER - Updated piwik to latest version.

573: Create prototype viewer for ATC visualiser

Phil has created a prototype plugin for their ASD visualiser.

422: NumberFormatException if caret is placed in front of negative sign and number is typed

When editing integer & float cells; all keystrokes aside from '-' are ignored when the user has placed the caret in front of the negative sign.

405: In Integer cell, pressing negative (-) on an empty value doesn't do anything

When editing integer cells; users are now able to press '-' on an empty cell to start entering a negative value.

449: Filename -- OpenSHAPA should display name of open document in top bar of spreadsheet window

When viewing the spreadsheet; the name of the open document is displayed in the top bar of the spreadsheet window.

486: Float editor - "specials" support.

When editing float cells; users are able to transition from 'invalid' states to reach valid values - for example '-.3' and '.3', if the user leaves a cell before a valid value has been created, it will revert back to an empty place holder.

492: Only Numpad Enter should create new cells

When creating new cells for the spreadsheet; only numpad enter can be used as a shortcut to create new cells.

498: Can't select values by holding down shift

When editing the spreadsheet; users are now able to hold shift and use the arrow keys to select bodies of text.

518: Need spec for click heirarchy in the editors

A detailed specification has been created for click hierarchies within editors.

586: When a -ve is typed in a float, the caret is in front of a zero, so an extra zero is added in the number

When editing float values in the spreadsheet; toggling a negative values no longer inserts an extra zero into the value.

587: Can't type a negative number with decimals properly

When editing float values in the spreadsheet; users are able to correctly type negative values.

507: Setup Mac Mini to automatically start up windows and mac clients on reboot.

SERVER - The test mac-mini is now setup to automatically connect mac and windows test clients to Hudson.

599: Fix and restore the add predicate button on the vocab editor

When viewing the vocab editor; the add predicate button has been repaired and should function according to the vocab editor specification.

600: Fix and restore the ability to edit formal argument names.

When viewing the vocab editor; the ability to edit formal argument names has been repaired and should function according to the vocab editor specification.

601: Fix and restore the ability to edit predicate and matrix names

When viewing the vocab editor; the ability to edit vocab element names has been repaired and should function according to the vocab editor specification.

602: Fix and restore the ability to revert changes on the vocab editor

When viewing the vocab editor; the ability to revert changes has been repaired and should function according to the vocab editor specification.
