

OpenSHAPA: 1.02 Beta

940: "8" won't make movie play

When playing data in the data controller; users are now correctly able to play movies using "8" without having to shuttle the video first.

1210: Tooltip with time on top of current temporal position on the data controller

When navigating tracks in the track view; mousing over the red current temporal position will raise a tooltip containing the current time.

728: Improve Spreadsheet Cell Selection

When editing the spreadsheet; cell selection and focus is now considerably clearer with the addition of a 'cell border'. Cells that have focus also enable many cell options, including cell delete and new cell to left & right.

1357: Lock track movement

When synchronising tracks in the track view; users are now able to lock tracks in position using the 'lock' button.

936: Add "bookmark" feature to track view.

When synchronising tracks in the track view; users are now able create bookmarks in selected tracks. These bookmarks are placeholders in data viewers that can be snapped together to synchronise videos.

1003: Save bookmarks to the project file.

When saving projects; bookmarks that have been created in the track view are now saved and restored.

1004: Add the concept of a track selection.

When synchronising tracks in the track view; users are now able to toggle track selection on and off.

1006: Create snap algorithm. Snap points are begin, end and bookmark (if any).

When synchronising tracks in the track view; the button 'snap' can be used to easily align bookmarks as well as start and end times of various tracks.

1276: Invert the region colouring

When navigating data using the data controller; the colouring for the 'region of interest' is now inverted so that the areas that are "cropped" are grayed out.

1326: Need a shortcut key for setting the region of interest to the current find times. (Some modifier + find)

When navigating data displayed in the track view; users are now able to constrain the region of interest (video playback window) to the currently selected cell onset and offset by holding down 'ctrl' and pressing find on the data controller.

1314: Ability to scroll the track sideways

When synchronising tracks in the track view; users are now able to scroll the track window sideways when zoomed in on tracks.

435: Spreadsheet - opens with dimensions too small

When starting OpenSHAPA; the Spreadsheet opens with a decent starting dimension.

482: Update the server so that it can receive emails (i.e. so that people can email a bug to fogbugz).

SERVER - Now have an email address configured 'developers@openshapa.org' so that people can email stuff in directly to fogbugz.

1335: Data controller missing button - set onset.

When navigating data using the data controller; the set onset button is again restored on the data controller.

757: Data viewer - Java error if fast forward past end of media

When playing data in the data controller; the region of interest limits the ability for users to fast forward past the end of the media.

756: Data viewer - Should not play past end of video

When playing data in the data controller; users are now unable to play past the end of the end of the last track.

760: Video skips while fast forwarding @ 4x

When playing data in the data controller; users are now able to get smooth video playback when fast forwarding at faster than 4x.

1072: Find + Play busted

When playing data in the data controller; users are able to now flick back and forth from finding and playing data.

855: Add Data on Viewer - crashes if "Files of Type" is Audio, but video file opened

When adding audio data; the viewer no longer crashes OpenSHAPA on windows.

1013: Need to refactor a bunch of stuff and move it from org.openshapa.OpenSHAPA to org.openshapa.project.Project

REFACTOR - Moved a bunch of stuff that should logically exist in the project class.

1014: Need to refactor the openshapa source tree to be three broad

categories: view models and controllers.

REFACTOR - Created broad models, views & controllers packages that everything fits within.

1035: Add PMD plugin for maven/hudson.

SERVER - Added the PMD plugin to hudson so that PMD reports are generated each time a build is executed.

1066: Port database tests to TestNG

Ported the tests from JUnit to TestNG.

1067: Port UI-tests to FEST.

Ported the ui-tests from uispec4j to FEST.

1075: Opening a database fails with a file that contains text with multiple lines.

When opening database data; CSV files with text columns that contain multiple lines now correctly saved and opened.

1077: Deleted Variable Crash

When editing the spreadsheet; creating new cells after deleting variables no longer generates a 'dang nabbit' error.

1079: Safe exit dialog not showing

When exiting OpenSHAPA on windows; the safe exit dialog (are you sure you want to quit?) is now displayed if you have unsaved changes.

1215: Need to tweak download snapshot page links.

WEBSITE - Tweaked the download links on the snapshot page so that downloads are correctly counted in Piwik.

1133: Upgrade Fogbugz to 7.14

WEBSITE - Upgraded fogbugz to 7.14

1187: Swap out log4j with usermetrix

Swapped log4j out with usermetrix so that we can gather usage statistics and automated error reporting.

1189: Add opt in dialog for accepting sending usage information.

Added an opt-in dialog for sending usage data; OpenSHAPA now asks users if they wish to contribute to the OpenSHAPA effort.

1353: Remove Help -> Test menu item.

Removed redundant menu item; help -> test.

566: Selecting a placeholder, i.e. "<val>" and then selecting something else will result in the "<val>" having a different background

On OSX, selecting a place holder such as "<val>" and then selecting something else will no longer result in "<val>" having a different background colour.

1361: When a play window is locked, you can jog outside of the boundaries.

When navigating tracks in the track view; users are now unable to jog outside the region of interest boundaries.
