

Release Notes - OpenSHAPA: 0.8 Alpha

81: Spreadsheet - ability to font sizes in spreadsheet

When viewing the spreadsheet; users are now able to "zoom" into the spreadsheet and make the font smaller and larger. Users can reach this functionality from the "Spreadsheet->zoom" menu or by using the shortcut "meta +" and "meta -".

299: Need features section on the website

SERVER - The website now has a 'features' section which outlines the major features of OpenSHAPA (<http://openshapa.org/dev/features.html>)

293: Contribute - How to fix bugs

SERVER - The wiki on the website now has a sections on "How to contribute code (<http://openshapa.org/fogbugz/default.php?W53>)" and "Lifecycle of a bug" (<http://openshapa.org/fogbugz/default.php?W61>).

301: Spreadsheet - select variable name on mouse down, not mouse up

When viewing the spreadsheet; users are able to select a spreadsheet column when the mouse button is clicked, rather than when the mouse button is released.

302: Spreadsheet - select cell on mouse down, not mouse up

When viewing the spreadsheet; users are able to select a spreadsheet cell when the mouse button is clicked, rather than when the mouse button is released.

401: The menu item Spreadsheet->List variables should probably be "Variable List" for consistency with the window that opens

When viewing the contents of the menu "Spreadsheet"; the item "List Variables" has been renamed to "Variable List".

431: Get a decent SSL cert from a real vendor.

SERVER - We now have a decent SSL certificate for openshapa.org, this means that visitors are able to use <https://openshapa.org/fogbugz> and not have to deal with security exceptions.

433: Permission errors when trying to open Video

When developers are debugging OpenSHAPA in NetBeans; they need to configure their security policy as per the details on the wiki (<http://openshapa.org/fogbugz/default.php?W5>) so that they can debug the video controller.

443: Save As -- should be Save As... while it opens a directory dialog box

When viewing the contents of the menu "File"; the item "Save As" has been renamed to "Save As...".

461: Spreadsheet - double clicking selects across multiple args in matrix and predicate

When viewing multiple arguments in matrix and predicate variables; double clicking on a variable now only selects the single argument, rather than the all the arguments.

445: Open -- should be Open...

When viewing the contents of the menu "File"; the item "Open" has been renamed to "Open...".

446: Create New Database 'OK' -- should be 'OK' not 'Ok'

When creating a new database; the "Ok" button has been renamed to "OK".

450: Editors - Predicate - Typing into the predicate name is broken.

When viewing the spreadsheet; users are again able to edit predicate names.

453: Editors - Float editor decimal point handling is not to spec

When viewing the spreadsheet; the manipulation of float values is more closely conforming to the specification.

454: Editors - Float editor problem if selection made and decimal point typed

When viewing the spreadsheet; the insertion of the decimal point when a selection is made in a float editor again functions correctly.

455: Editors - first tab press in an editor doesn't commit the value

When viewing the spreadsheet; pressing the tab key a single time commits the value to the database.

457: Latest Java update on OSX breaks scripting.

When executing a script; users running machines OSX Leopard, with java update 4 are now able to execute scripts again.

417: Variable name "ge" says it already exists even if it is the first variable created.

When creating variables; users that attempt to create variables that match system variables such as 'ge', now receive a more informative error message.
