

Release Notes - OpenSHAPA: 0.9 Alpha

319: Need a proper download snapshot page, that orders the latest at the top rather than the bottom.

SERVER - When downloading development snapshots; users are now presented with an information page, that outlines included fixes that require verification and fixes that are verified to be included in the snapshot build.

The snapshot download page can be found at:
<http://www.openshapa.org/dev/snapshot.php>

337: Currently tests are disabled on the server

SERVER - When nightly builds are generated; they are now farmed out to a Mac Mini that is acting as our test machine. The entire test suite is then executed on both on WindowsXP and OSX Leopard. Only if the tests complete is the build pushed out to the snapshot page.

366: Video Controller - we need small sample QT file to distribute with each release

When downloading OpenSHAPA; users now have access to a sample video that is bundled with the OpenSHAPA application. This sample video can be found in the samples/video directory of your OpenSHAPA installation.

394: Editors - text editor bugs and anomalies

When users are entering text into a text variable; the field now correctly responds to the user.

395: Need to upgrade piwik to version 0.4

SERVER - Upgraded piwik to 0.41

396: The value field doesn't expand until after all the text is entered

When users are entering text into a text variable; the value field now correctly expands as the user enters text.

432: The Create New Database dialog should be modal

When users invoke the New Database dialog; it is presented to the user as a modal dialog.

398: Possible to set caret within <val> of new cell preventing input

When users attempt to edit a <val> placeholder; they are now unable to to insert the caret within the <val> placeholder.

399: Left and right cursor keys do nothing in Timestamp

When using the left and right cursor keys within a timestamp; the caret now correctly moves.

400: Delete key doesn't move caret in Timestamp

When users use the delete key to remove characters from a timestamp; the caret now correctly moves after the character is deleted.

417: Variable name "ge" says it already exists even if it is the first variable created.

When creating variables; users that attempt to create variables that match system variables such as 'ge', now receive a more informative error message.

425: Write UI tests for the new database dialog

When OpenSHAPA is being automatically tested; UI tests for the new database dialog are included and executed alongside all the other tests.

441: Upgrade wordpress to 2.8

SERVER - Upgraded wordpress to 2.8

442: Save As -- directory dialog box not listing folders

When users invoke the 'Save As...' dialog; it now correctly lists folders as well as files.

439: Editors text editor

When users attempt to edit a <val> placeholder within a text variable; it is now correctly replaced with the desired contents of the text variable.
