OpenSHAPA: 1.08 Beta

25: VariableList - Make the variables list editable.

When viewing the variables list; users are now able to edit variable names and change variable visibility.

26: VariableList - Allow for copy and paste within the variables list.

When viewing the variables list; users are now able to copy and paste content within the list.

126: Spreadsheet - Shortcut key for showing and hiding variables. (i.e. for the selected column) - it should be a toggle

When editing the spreadsheet; users can now select a column and hide it by selecting 'spreadsheet -> hide selected variable'.

275: VocEd - Implement shortcut keys for the vocab editor dialog.

When editing vocabulary using the vocab editor; users can now use the old MacSHAPA shortcut keys for many of the operations.

434: VariableList - Columns should be sortable

When viewing the variables list; users are now able to sort by 'visibility', 'name', 'type' or 'comment'.

2100: *** Dave:Implement OS X gestures (pinch-and-squeeze etc) on the track viewer and video player ***

When navigating data in the track viewer; users are able to use the OSX pinch gesture to zoom and the OSX three finger swipe gesture to navigate to the left or right.

2328: Default data controller and track view to be open when you start OpenSHAPA.

When starting OpenSHAPA; the data controller and track viewer are opened by default.

2020: Need to add volume control to audio plugin.

When exploring data using the audio plugin; users are able to control the volume using the supplied icon in the track header.

2021: Need to add visibility control to audio plugin.

When exploring data using the audio plugin; users are able to hide and show the man view using the supplied icon in the track header.

306: Startup Splash Screen for OSX

When starting OpenSHAPA on OSX; a splash screen is displayed while OpenSHAPA is loading.

1753: Audio Plugin.

When exploring data using the OpenSHAPA track editor; users can now add audio data to a separate track.

21: VariableList - Need to add the 'comment' field to the variable listing

When viewing the variables list; a new field 'comment' can be used to write short notes about a

particular variable.

407: VocEd - Focus on arg is lost after Move Arg is clicked

When editing vocabulary using the vocab editor; moving an argument no longer loses focus.

641: VocEd - doesn't update if it is open

When editing the spreadsheet; the vocab editor is automatically updated if it is also being displayed.

917: VocEd - closes dialog upon "ve name in use" error.

When editing the vocabulary using the vocab editor; pressing OK when encountering a "ve name in use" error returns you back to the vocab editor.

918: VocEd - predicate/matrix auto-numbering can be improved

When editing the vocabulary using the vocab editor; the creation of default matrix / predicate names now uses an improved number generating scheme.

920: VocEd - tab highlights one argument but selects another

When editing the vocabulary using the vocab editor; pressing tab now selects and highlights the correct argument.

1706: Moving arguments in the vocab editor is broken.

When editing the vocabulary using the vocab editor; the ability to move arguments has been restored.

2016: Clear region doesn't actually remove time restrictions

When exploring data using the OpenSHAPA track editor; clearing the region of interest removes all time restrictions.

2038: Order of variable list rows should be the same as spreadsheet order

When viewing the variables list; the default order of the variables is the same as the spreadsheet order.

2251: Move native library folder into its own temporary directory on OS X

When starting OpenSHAPA; native libraries are unpacked into their own temporary folder.

2309: Need to mark all non QTJava plugins as 'UNSTABLE' in the add data dialog drop down's

When exploring data using the track viewer; all new plugins are marked as 'UNSTABLE' in the data type drop downs.

2311: Don't load Gstreamer plugins if gstreamer is not present.

When exploring data using the track viewer; gstreamer plugins are not loaded if gstreamer is not present.

2314: Rubbish bin icon.

When exploring data using the track viewer; a new rubbish bin icon can be used to permanently

delete a track from the track viewer.

2320: ***Dave: yoko-ono native libs need to be compiled for 32bit. ***

When exploring data using the track viewer; a new video option is available - cocoa quicktime, this is a new plugin that may be unstable but may provide greater performance.

2099: Implement a Gstreamer video player plugin

When exploring data using the track viewer; a new video option is available - GStreamer, this is a new plugin that may be unstable but provide greater playback performance.

1757: Switch OpenSHAPA over to use Java 1.6

OpenSHAPA now runs on the Java1.6 platform (32-bit).

1760: Update Wiki instructions on installation on snow leopard and leopard.

SERVER - The wiki now displays updated installation instructions for OSX and windows.

1761: Add to news post instructions on updating your java installation if you have a 1.5 fix on snow leopard.

SERVER - instructions on how to get started with OSX written.

2104: Gstreamer bundling on OS X

When installing OpenSHAPA; a easy to user installer for Gstreamer is available for setting up Gstreamer on OSX.

1990: Need to re-enable anti-aliased text for ord, onset, offset and datapanel in Spreadsheet cell.

When editing the spreadsheet; text is correctly anti-aliased.
