OpenSHAPA: 1.11 Beta

994: Spreadsheet - Need to change cursor to something else indicate that the user can drag to shift columns

When viewing the spreadsheet; users are now provided a visual cue to help them discover that they can re-order columns.

2470: Need to transition the file -> open / save dialogs to use quaqua.

When opening files in OpenSHAPA; a chooser that is much closer to the native OSX file chooser is now shown.

2478: When you save a file it should go into the 'recent files' list automatically as well.

When looking inside the 'most recent' files, it is also populated with content that has been saved.

120: Quicktime Viewer - Max video size usable in the current macSHAPA is 2gb, users are hitting this limit quickly.

When exploring video data; OpenSHAPA is able to handle videos larger than 2GB.

1430: DataController onset and offset should be updated when a cell's onset and offset are modified

When creating cells with the data controller; the onset find field is now automatically populated when the user sets the cell's offset.

1529: Pressing Set New Cell Offset (Num.) when another cell is selected causes the find offset value to change to the offset value

When exploring data streams with OpenSHAPA; an improved data controller can now be used.

1830: Save Project keybind

When using the ctrl+s shortcut for saving project files; it is now more robust depending on what currently has focus.

2321: Data track "lock" state is not preserved when a project is saved and re-opened

When editing tracks presented in the data controller; the 'lock' button is now easier to follow, by being labeled 'lock all' or 'unlock all' depending on the lock state of the tracks.

2400: A Project must be created before opening Controller

When displaying the data controller; a project is no longer required to be created.

2465: Rename set new cell offset to 'instaneous cell'

When using the data controller to navigate data streams; a dedicated button for creating 'point cells' is now provided, which sets the onset and the offset immediately.

2468: OpenSHAPA project files don't seem to transition between windows and OSX very well. Unable to find video.

When opening and saving OpenSHAPA project files; they are now considerably easier to share between windows and OSX computers.

2469: The recent file list in File menu should be remembered when someone closes and re-starts OpenSHAPA.

When restarting OpenSHAPA; the 'most recent' files stored in the File menu is now remembered and restored.

2481: Need a way to delete individual bookmarks

When editing tracks presented in the video controller; users are now able to delete individual bookmarks by right clicking a bookmark and selecting 'delete'.
